☐ This opinion has been established on the basis of a translation from the original language into the following language \_\_\_\_\_, which is the language of a translation furnished for the purposes of international search (under Rules 12.3 and 23.1(b)).

2. With regard to any nucleotide and/or amino acid sequence disclosed in the international application and necessary to the claimed invention, this opinion has been established on the basis of:

a. type of material

☐ a sequence listing

☐ table(s) related to the sequence listing

b. format of material

☐ in written format

☐ in computer readable form

c. time of filing/furnishing

☐ contained in international application as filed.

☐ filed together with the international application in computer readable form.

☐ furnished subsequently to this Authority for the purposes of search.

3. ☐ In addition, in the case that more than one version or copy of a sequence listing and/or table relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

**WRITTEN OPINION OF THE  
INTERNATIONAL SEARCHING AUTHORITY**

International application No.  
PCT/US04/44042

**Box No. V Reasoned statement under Rule 43 bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

**1. Statement**

Novelty (N)	Claims <u>NONE</u>	<u>YES</u>
	Claims <u>1-26</u>	<u>NO</u>
Inventive step (IS)	Claims <u>1-26</u>	<u>YES</u>
	Claims <u>NONE</u>	<u>NO</u>
Industrial applicability (IA)	Claims <u>1-26</u>	<u>YES</u>
	Claims <u>NONE</u>	<u>NO</u>

**2. Citations and explanations:**

Claims 1-26 lack novelty under PCT Article 33(2) as being anticipated by Endo et al. (US Patent Number 5,679,612).

Endo et al. teach a fused cast refractory containing components such as zirconia, alumina, boron oxide, and silica in the amounts claimed thus anticipating the instant invention (see claims 1-16 of Endo et al. in columns 19-20). Further, the applicants' claimed components such as sodium oxide, calcium oxide, iron oxide, and titanium dioxide read upon zero because "up to" claim language includes zero as a lower limit.

Claims 1-26 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry and used as a refractory for high temperature applications.
